Please join us to hear....

Richard Strickland

Lecturer,
School of Oceanography
University of Washington

Saturday, October 18
12:00 - 12:45

Highline Community College
MaST Center

Located near the Redondo Beach Park

Exploration of the deep sea since the colonial era has depended on two types of human traits: the curiosity and bravery to undertake risks in a hostile environment, and the ingenuity and financial support to develop undersea technology. As time has progressed, the latter has eclipsed the former. We will look at the chronology of undersea exploration, from the early heroic pioneers to today's technology that allows robots to take the place of humans.
